

## Site Accessibility Checklist

*Thank you for choosing a quality building from Amish Woodworks. In order to ensure precise and care-free delivery, we kindly ask that the following checklist be verified by you, our valued customer.*

- Access for delivery to site **must be** at least 2 feet wider than the width of the shed.  
Example: An 8'x10' shed requires an entrance of at least 10 feet.
- A clear path of entrance and delivery is present. Obstructions, including but not limited to trees, shrubbery, pavers and other large objects are absent from the entrance, delivery, and set-up location. Adequate navigability for a flat-bed truck is required.
- Any and all permits necessary and site preparation including leveling or installation of a pad are performed prior to shed delivery, if required and are the responsibility of the purchaser along with any expenses incurred.
- 14 feet minimum height clearance is required. Branch removal is the responsibility of the customer.
- Any incline/decline or otherwise unlevel topography has been verified as accessible by purchaser.
- Any obstructive gate, fencing or similar boundary is removed prior to delivery of the shed at the expense of the purchaser.
- If delivery requires ingress or egress through a neighbor's property, written and signed permission for access is to be obtained by purchaser of structure.
- Amish Woodworks is not responsible for any damage to the landscape due to weather conditions or delivery circumstances.
- Any purchase cancellation of a shed order must be in writing and will result in a restocking fee, to be determined by Amish Woodworks.
